Resource person explained type of natural disaster that the world has been facing such as Earthquake, Landslide, Flood, Cyclone, Dises etc. This type of common natural disaster has impacted every country, he also mentioned that Cyclone is most common in South Asia but the came cyclone has different name in South East Asia as typhoon. He also mentioned one of the most common natural disaster Mizoram experienced every year is landslide disaster during monsoon season. Beside this man-made disaster such as fire, forest fire, chemical leakage and oil spillage effect on environment, human and wild life. Resource person emphasized State preparation for disaster management and its preparedness on any natural or man-made disaster. The entire participant had shown keen interest in disaster preparedness and disaster effect on human settlement. The seminar was successful and all the participants expressed other seminar like this to be organized as much as possible.
